TEAM AND BRAND IDENTITY

"With regard to performance, commitment, effort, dedication, there is no middle ground. You do something very well or not at all." -Ayrton Senna

COLOUR PALETTE

Our team colours- purple, blue and gold- represent our bold and dynamic identity, reflecting speed, power, and prestige.

We chose purple as one of our team colours because it represents innovation, ambition, and empowerment, all of which reflect our values and goals. Purple symbolises creativity and forward-thinking, highlighting our commitment to developing original engineering solutions and pushing the boundaries of design and technology. It also represents female empowerment and gender equality, reinforcing our mission to inspire young girls to explore STEM and challenge stereotypes in engineering. Additionally, purple conveys ambition, excellence, and high performance, reflecting our drive to compete at the highest level while maintaining professionalism and quality in our work. Purple signifies confidence and individuality, representing our bold design choices and unique team identity.

Next, we chose blue as part of our team colour palette because it represents trust, intelligence, and precision, all of which are key values. Blue symbolises analytical thinking and technical expertise, reflecting our commitment to careful design, data-driven decision making, and engineering excellence. It also conveys calmness and reliability, highlighting our focus on thorough testing, iteration, and consistent performance under pressure. Additionally, blue embodies professionalism and integrity, reinforcing our dedication to following rules, maintaining safety standards, and producing high-quality work. Blue represents unity and teamwork, reflecting our collaborative approach and shared commitment to achieving our goals.

We chose gold as our last team colour because it represents success, achievement, and excellence, which align closely with our goals in STEM Racing. Gold symbolises high performance and ambition, reflecting our drive to compete at the highest level and strive for victory in both design and racing challenges. It also conveys prestige and quality, highlighting our commitment to producing a well-engineered, polished, and professional car. Additionally, gold represents inspiration and motivation, reminding us to push boundaries, set high standards, and encourage others to pursue STEM opportunities. Gold embodies confidence and optimism, reinforcing our positive team spirit and determination to reach our full potential.

EXECUTIVE SUMMARY

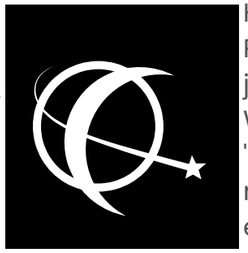
Ekleipsis is not just an engineering team; it is a brand representing Jersey's pioneering spirit on the global STEM-racing stage. This portfolio outlines how we transformed our small-island narrative into a professional brand, built a data-driven marketing campaign, secured sustainable sponsorships and delivered a world-class visitor experience. Our aim is to maximise impact for partners and inspire the next generation while operating responsibly and within budget.

LOGO

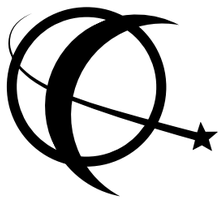
Our logo is a visual representation of our team's core philosophy: Ignite Innovation, Accelerate Success.

- The Purple Sphere: The bold, segmented purple circle represents the foundation of our work—the engineering cycle, the wheel of the vehicle, and the global STEM community we are a part of. The dynamic 'crescent' cutouts imply rotation and kinetic energy, showing that our team is always in motion.
- The Gold Trajectory: The striking yellow streak cutting across the sphere symbolizes the 'Ignition' of innovation. It breaks the boundaries of the circle, representing our drive to think outside the box and overcome engineering challenges.
- The Star: Ending in a sharp, rising star, the trajectory signifies our ultimate destination: excellence, high performance, and the accelerating path toward victory.

To ensure the 'Ekleipsis' identity remains impactful across diverse applications, from screens to embroidered uniforms, we developed a comprehensive suite of logo variations. This allows us to maintain high visibility and brand recognition regardless of the background colour or material limitations. However, regardless of the color variation, the geometric integrity of the logo remains locked. We do not alter the aspect ratio, the thickness of the orbital ring, or the angle of the star trajectory. This strict adherence to shape ensures that whether the logo is seen in Gold on a shirt or White on a cap, it is unmistakably Ekleipsis.



High contrast is essential for legibility. Placing a purple logo on a purple jacket would result in low visibility. The White variation ensures the branding 'pops from a distance, maintaining readability even in low-light environments.



Ensures the logo remains identifiable even when colour printing is not available or when stamped on light materials, where gold might lose definition.

The Primary Logo: It displays our full brand palette, reinforcing the connection between Purple (Ambition) and Gold (Success).

The White on Gradient Logo: emphasises our urge to be unique and forward-thinking. It is bright and eye-catching, much like our team

TEAM AND BRAND IDENTITY

"With regard to performance, commitment, effort, dedication, there is no middle ground. You do something very well or not at all." -Ayrton Senna

NAME

We chose the name Team Ekleipsis because we felt it perfectly captured our goals and determination to succeed in this competition. Having previously won a Tech Award, our team wanted a name that reflected how we are entering this challenge stronger, brighter, and more motivated than ever before. The word Ekleipsis comes from the Greek language and translates to "eclipse," which symbolizes our dedication and hard work — day and night — as we strive for excellence.

Just as an eclipse outshines and transforms the sky, we aim to outshine our competitors through creativity, precision, and teamwork. The word itself is derived from ekleipein which is composed of "ek" meaning "out," showing that we will outshine everyone and "leipein" meaning "to leave" because we will leave the competition as the winner. Ekleipsis is a natural phenomenon, it is quick, rare and stunningly beautiful just like we intend to be.

SCOPING AND PROJECT SCHEDULE

Our goal as a team is to win our regional competition and advance as far as possible throughout the remainder of the championship. Beyond achieving competitive success, we aim to inspire young girls to explore STEM subjects and help promote the visibility and importance of female roles within science, technology, engineering, and mathematics. We want to demonstrate that STEM is an inclusive, exciting, and accessible field for everyone.

As part of our technical objectives, we hope to deliver a well-engineered car supported by a polished, innovative design, alongside a cohesive and engaging presentation. Ultimately, we are striving not only to excel in each judged category but also to position ourselves as strong contenders for overall victory.

To develop our car, we used CAD software and Fusion 360 to model the vehicle and produce precise engineering drawings. Computational Fluid Dynamics (CFD) was used to assess and refine the aerodynamics of the design, ensuring optimal performance. We also relied on Fusion 360 to create detailed renderings that allowed us to visualise the final appearance of the car and communicate our design choices effectively.

Effective time management was another crucial factor in completing this project. To organise our workflow, we created and followed a Gantt chart, which helped us allocate tasks, track progress, and meet all deadlines.

We operated within several constraints, including a tight turnaround time leading up to the 10th of December, a budget of £1500, and limited access to certain resources. Despite these challenges, we remained focused on delivering high-quality work across all areas of the project.

For this project, the stakeholders included our school, sponsors and team members, as well as our external stakeholders, such as local media, each playing an important role in supporting, guiding, or evaluating our work.

IGNITE INNOVATION. ACCELERATE SUCCESS

"Ignite Innovation, Accelerate Success is the philosophy that drives us. It signifies the perfect loop of high-performance racing: starting with a spark of creative engineering and using it to propel us toward victory at maximum speed. We don't just build cars; we fuel the future."

Our motto, 'Ignite Innovation, Accelerate Success,' captures the dual nature of our STEM racing journey. The first half, 'Ignite Innovation,' represents the spark of creativity and the engineering mindset required to design a winning vehicle. It is the combustion of new ideas, the heat of problem-solving, and the passion that drives our research.

The second half, 'Accelerate Success,' speaks to the application of those ideas. It is about translating theoretical physics and design concepts into tangible velocity on the track. For us, success isn't just about crossing the finish line first; it is about the constant momentum of learning, improving our efficiency, and pushing the limits of what is possible as a team.

Ekleipsis receiving a TechAward for our research first approach to drive success on track

BRAND EVOLUTION

- Phase 1: Ideation: We brainstormed over 50 names, eventually selecting 'Ekleipsis' for its astronomical roots, symbolising how we plan to 'eclipse' the competition. We voted as a majority on this through multiple-choice questions on a Google Form.
- Phase 2: Refinement: Early logo drafts were too complex for small-scale printing (like on the car wing). We simplified the design into the 'Orbital Sphere' icon, ensuring legibility even when the car is moving at 20m/s and to create an iconic and memorable brand.
- Phase 3: Unification: We developed a 'Brand Bible' (Style Guide) that defines our exact Hex codes (e.g., Purple #3e0c70, Gold #f8be19) and fonts. This document was shared with everyone to ensure 100% colour consistency across all materials.

RISK MANAGEMENT

"If you analyse the function of an object, its form often becomes obvious" - Ferdinand Alexander Porsche

RISK MANAGEMENT

In our STEM Racing project, we maintained clear evidence of budgeting by carefully planning and recording all projected and actual expenditures from the start of the project through to completion. This ensured that we remained aware of our financial position at all times and were able to make informed decisions about spending priorities. Throughout the project, we identified potential risks early in the process, including the risk of missing deadlines due to the tight turnaround, technical failures during design and testing, material shortages, and safety hazards during assembly, handling, and operation of the car.

To effectively mitigate these risks, we implemented a range of detailed strategies. We built extra time into our project schedule to allow for unforeseen delays and design changes, ensuring that key deadlines could still be met. We conducted multiple rounds of testing and iterations to identify technical issues as early as possible, allowing us to refine and improve our design before final production. Backup materials and alternative suppliers were considered to reduce the risk of material shortages impacting our progress.

In addition, we enforced strict safety procedures and carried out regular safety checks during all build and testing activities to minimise the risk of injury and equipment damage.

Furthermore, we set aside spare funds within our budget as a contingency to cover any unexpected costs, such as replacement parts or additional resources, ensuring that unforeseen financial challenges could be managed without compromising the quality or completion of the project. This proactive and structured approach to budgeting and risk management allowed us to respond to challenges efficiently, make informed decisions under pressure, and keep both our project timeline and budget on track, while consistently maintaining high standards in design, engineering, and overall team performance.

Risk	Impact (1–5)	Probability (1–5)	Mitigation	Owner
Shipping delay due to island logistics	5	4	Order early, price quicker shipping and delivery routes, stay as local as possible	Eve + Abigail
Car scrutineering failure	5	3	Three-stage internal audit; manufacture spare compliant wings	Florence
Sponsor withdrawal	4	2	Early contracts; maintain contingency fund	Eve
Social media backlash	4	2	Pre-approve posts; monitor comments; crisis communication plan	Eve + Abigail
Team member illness	3	3	Cross-training; flexible workload redistribution	Eve

Crisis Management Protocol "We understand that a brand takes months to build and seconds to destroy. We established a PR Protocol for potential crises (e.g., a disqualification or negative social media comment):

1. Do Not Engage: Team members are forbidden from responding emotionally to negative comments.
2. Draft: Eve and Abigail draft a factual, polite response.
3. Approve: The response is checked against our 'Values' (Integrity & Professionalism) before posting.

ROLES AND RESPOSNIBILITIES

"If you analyse the function of an object, its form often becomes obvious" - Ferdinand Alexander Porsche

ROLES AND RESPONSIBILITIES

Technical Lead and Team Principal (Eve)

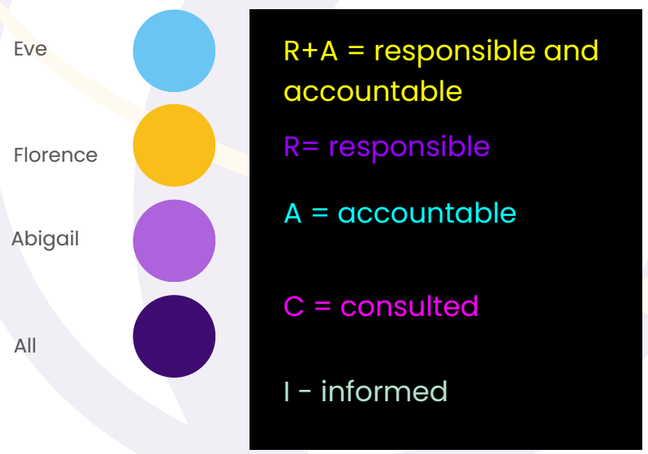
The Technical Lead is responsible for all engineering and performance aspects of the project. Eve leads the CAD modelling process, creating and refining the car design to ensure it meets both performance goals and competition regulations. She makes key aerodynamics decisions, supported by Computational Fluid Dynamics (CFD) testing and analysis. She ensures full compliance with all regulations throughout the design process. Eve oversees testing, iteration, and data interpretation, using results to inform performance improvements and optimise the final design. She also produces and supplies detailed engineering diagrams, simulations, CAD screenshots and provides a clear technical rationale for all design decisions included in the design and engineering portfolio pages. She was also responsible for managing the team and ensuring that all goals were met, as well as communicating with sponsors and partners.

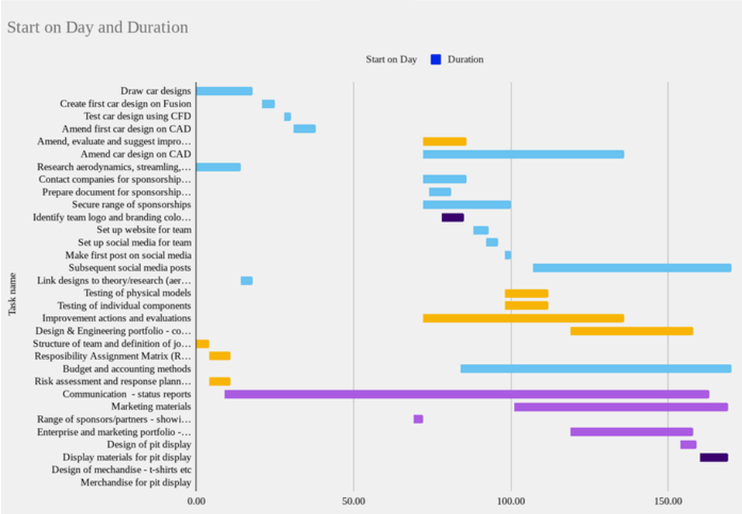
Scrutineering Lead (Florence)

The Scrutineering Lead is responsible for ensuring that the car fully complies with all technical, safety, and competition regulations. Florence leads the scrutineering process by carefully checking the design and final build against the official rules. She ensures that all team decisions are evidence-based and rules compliant. Florence works closely with the Technical Lead to identify and resolve any potential regulation issues early in the design process. She writes and maintains the team's risk assessment, ensuring that all hazards are identified and controlled. Florence also plays a key role in producing and reviewing the design and engineering portfolio to ensure that all technical information is accurate, compliant, and clearly presented.

Creative Lead (Abigail)

The Creative Lead is responsible for all visual, branding, and presentation elements of the project. Abigail develops the team's visual identity, including the logo, colour scheme, and overall brand style. She leads the layout, design, and production of both the enterprise and marketing portfolio, as well as the pit display. Abigail is also responsible for rendering and livery, creating a chic and cohesive design. She provides realistic project deadlines from a creative perspective and identifies the resources and tools needed to produce high-quality visual and marketing materials.





Tasks	Eve	Florence	Abigail
Research - aerodynamics/streamlining	R + A	C	C
CAD design - Fusion	R + A	I	I
Scrutineering checks	C	A	I
CFD testing of designs	R + A	I	I
Evaluation of CFD - improvements needed	R + A	C	I
Data analysis from physical testing - air tunnel	C	R + A	I
Data analysis from physical testing - track	C	R + A	I
Development of sponsorship pitches - heirachy of options	R + A	C	C
Contact and securing of potential sponsors	R	C	A
Set up on social media - FB	R + A	I	I
Set up on Social media - Instagram	R + A	I	I
Set up on social media - LinkedIn	R + A	I	I
Social media planning sheet	R + A	I	C
Production of social media content	R + A	R	R
Uploading of content as per plan	R + A	I	I
Design and development of team branding	R	C	A
Production of D+E Portfolio	A	R	I
Production of M+E Portfolio	C	I	R + A
Production of verbal presentation slides	R	R	R + A
Production of verbal presentation speech	R + A	R	R
Design and development of pit display	R + A	I	C
Production of materials for pit display	R + A	C	C
Development of merchandise	R + A	C	C
Design and development of team uniforms	R + A	C	C
Ordering of merchandise	R + A	R	R
Ordering of team uniforms	R + A	I	I

MARKETING

"If you analyse the function of an object, its form often becomes obvious" - Ferdinand Alexander Porsche

TARGET AUDIENCE ANALYSIS

Our marketing strategy segments our audience into three distinct pillars:

• **Corporate Partners (Sponsors):** We appeal to their desire for professionalism and community involvement, using LinkedIn to showcase our organizational structure and "Responsible & Accountable" management style.

• **The STEM Community (Judges & Peers):** We demonstrate technical competence and precision through "behind-the-scenes" content on Instagram, highlighting our iterative design process and scrutiny checks.

• **Future Innovators (Students):** We use accessible, visual content to demystify engineering, aiming to inspire the next generation of Jersey students to pursue STEM careers.

STRATEGIC OBJECTIVES

We utilise the 7Ps framework to ensure every touchpoint of the Ekleipsis brand is optimised for the judges and our audience:

• Product: Our core product is high-performance engineering. We treat the car not just as a vehicle, but as a showcase of precision, featuring our signature 'Purple Sphere' livery to ensure it is instantly recognisable on the track.

• Price: We positioned our sponsorship tiers (Bronze to Gold) based on a 'Value-Based Pricing' model.

• Place: Our distribution channels are hybrid. Physically, we dominate at the Pit Display; digitally, we distribute content via LinkedIn (for corporate professionalism) and Instagram (for visual storytelling).

• Promotion: We use a 'Story-First' approach. Instead of just asking for money, we promote the narrative of "Jersey to the World," and "Supporting Women in STEM," making sponsors feel they are funding potential, not just a school trip.

• People: Our team is our brand ambassadors. Every member, from the Team Principal to the Creative Lead, has undergone media training to ensure we communicate our values of 'Ambition and Integrity' consistently during interviews.

• Process: We have automated our marketing workflow. Using a shared content calendar and approval matrix (as seen in our RACI chart), we ensure no post goes live without a double-check for typo accuracy and brand alignment.

• Physical Evidence: This portfolio, our uniforms, and our pit display serve as the tangible proof of our brand's quality.

MENTORING YOUNGER TEAMS

As part of our STEM Racing journey, we wanted to give back to the community and help inspire the next generation of engineers, particularly encouraging young girls to explore STEM. To achieve this, Eve and Florence visited the Beaulieu Primary STEM Racing teams to provide guidance and support. During their visit, they shared the knowledge and experience they had gained from both last year's and this year's projects, offering practical tips on design, construction, and problem-solving. They worked closely with the primary students, helping them understand key engineering concepts and the racing process, while also demonstrating the excitement and creativity involved in STEM activities. Through this mentoring, Eve and Florence were able to empower the younger students, build their confidence, and inspire them to continue exploring STEM in fun and engaging ways.

SWOT ANALYSIS

Before launching our campaign, we conducted a SWOT analysis to identify where Ekleipsis stands in the competitive landscape.

Opportunites (External)	Threats (External)
CSR Budgets: Many local Jersey finance firms have unspent Corporate Social Responsibility budgets we can tap into	Logistics Delays: Shipping delays (weather/ferries) threaten our ability to receive merchandise on time.
Media Gap: Local news outlets are eager for positive youth stories, offering us free PR opportunities	Competitor Saturation: Other local teams are approaching the same pool of sponsors.
Opportunites (Internal)	**Weaknesses (Internal)**
Visual Identity: Our Purple/Gold color palette is distinct and high-contrast, standing out against the common red/blue teams.	Resource Limits: As a very busy 3 person team, we are very limited on hours available
Story: The "Small Island, Global Ambition" narrative is emotionally compelling to local sponsors	Budget Constraints: Manufacturing costs on an island are 15% higher due to shipping.

Strategic Response: To counter the threat of Logistics Delays, we prioritized 'Digital Sponsorship' assets (social media posts) which require no shipping. To address Competitor Saturation, we focused on niche sponsors (tech/engineering firms) rather than general retail, aligning with our specific STEM focus.

DIGITAL OUTREACH

"If you analyse the function of an object, its form often becomes obvious" - Ferdinand Alexander Porsche

OUR STRATEGY

Our social media strategy is not a 'one-size-fits-all' approach. We treat our digital presence as an ecosystem, utilising three distinct platforms to target our three core stakeholder groups. This segmentation ensures our message, 'Ignite Innovation, Accelerate Success', resonates effectively with each audience.

- INSTAGRAM (@Ekleipsisracing): The Visual Storyteller
  - Audience: The Global STEM Community, Judges, and Students.
  - Purpose: To visually document our engineering journey and inspire the next generation.
  - Strategy: We leverage high-engagement formats like Reels to showcase the kinetic energy of our car and the 'behind-the-scenes' manufacturing process. This platform is also our primary tool for outreach, used to document our mentorship sessions at Beaulieu Primary.
- LINKEDIN (Team Ekleipsis): The Professional Face
  - Audience: Corporate Sponsors (Current & Potential) and Industry Experts.
  - Purpose: To demonstrate commercial viability and Return on Investment (ROI).
  - Strategy: Content here is data-driven and formal. We post 'Quarterly Reports,' milestone achievements, and dedicated 'Sponsor Spotlights' (e.g., showcasing Cortida and Jersey Energy), proving to our partners that we are Responsible and Accountable brand ambassadors[3333].
- X (formerly Twitter): The Live Newsroom
  - Audience: Media Outlets (Jersey Evening Post, BBC), Event Organisers, and Motorsport/STEM Fans.
  - Purpose: Real-time engagement and news dissemination.
  - Strategy: Functioning as a 'live feed' during competition days, we use X for play-by-play updates of reaction times and race results, keeping our island community connected to the action in real-time.

OUR CONTENT

To ensure consistency, every piece of content we produce aligns with one of our four core narrative pillars, and it follows our brand identity. To ensure our brand remains consistent across all channels, we developed a distinct 'Tone of Voice' guideline. Whether writing a sponsorship email or an Instagram caption, our communication is always:

- Professional but Passionate: We avoid slang but embrace enthusiasm. We are engineers first, but we are also teenagers excited about racing.
- Educational: We don't just show that we built a car; we explain how. Every post aims to teach our audience something about STEM, aerodynamics, or project management.
- Inclusive: We use gender-neutral language and actively encourage participation from underrepresented groups in STEM.

Visual Content Production: visual strategy relies on a 'High-Contrast' aesthetic to stop the scroll on social media.

- Video: Recognising that video drives 2x more engagement than static images, we prioritised 'Reels' and time-lapses. These short-form videos document the 'messy' side of engineering, sanding wings, testing reaction times- authenticating our journey for the judges.

Pillar	Objective	Example Content
Engineering Excellence	Validate technical competence.	Time-lapses of Fusion 360 modelling and CFD airflow simulations.
The Jersey Narrative	Amplify our unique origin.	Stories highlighting our "Small Island, Global Ambition," featuring local landmarks and logistics challenges.
Women in STEM	Inspire & Empower.	Coverage of Eve and Florence mentoring younger students, reinforcing our purple brand value of female empowermen.
Sponsor Value	Deliver ROI.	High-quality photos of the car livery explicitly tagging partners like Switch Digital and Romerils.

OUR ENGAGEMENT STATISTICS

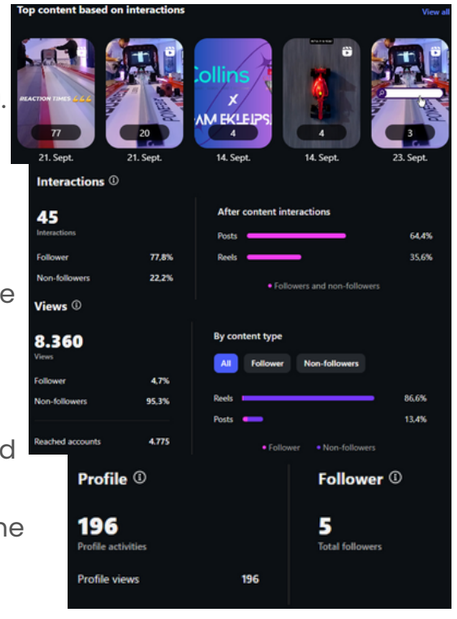
At Ekleipsis, we distinguish clearly between Impressions (Quantity) and Engagement (Quality). Our digital strategy was built on a 'Funnel Model'—using broad impressions to generate brand awareness for our sponsors, while focusing on deep engagement to build credibility with judges and the STEM community.

"The Top of the Funnel" Impressions represent the total number of times our content was displayed. This is the primary metric we report to our Gold Tier Sponsors (e.g., Cortida) to prove brand visibility.

- Total Reach: We successfully executed our objective to increase total social media impressions, leading up to the competition.
- Global vs. Local: By utilising hashtags like #STEM Racing and #WomenInSTEM, we expanded our reach beyond Jersey.

"The Middle of the Funnel" Engagement (likes, comments, shares, saves) is how we measure the resonance of our content. High engagement proves that our audience isn't just scrolling past; they are stopping to listen.

- Video Dominance: Transitioning to Instagram Reels allowed us to capture the kinetic energy of the projects, proving that our audience values "process over polish.



MERCHENDISE

"If you analyse the function of an object, its form often becomes obvious" - Ferdinand Alexander Porsche

DESIGN AND PRODUCT

Our merchandise range is not just clothing; it is a mobile billboard for our brand and our partners. We designed a cohesive apparel collection that balances the professional requirements of a racing team with the aesthetic appeal of modern streetwear. Utilising our core colour palette of Deep Purple, White, and Black, our uniform ensures Team Ekleipsis is instantly recognisable in the venue. To cater to different environments, we developed a multi-tier clothing line:

- The Team Polo (Performance Wear): Designed for competition days, the black polo features purple trim on the collar and sleeves. It serves as our primary 'formal' uniform, projecting authority and engineering competence during judging sessions.
- The Varsity Jacket (Travel & Comfort): A purple body with white sleeves and striped cuffs, this item brings a youthful, collegiate energy to the team. The back features a large-scale white logo and the 'TEAM EKLEIPSIS' wordmark, ensuring brand visibility even when walking away from a camera.
- The Team Cap (Lifestyle): A purple baseball cap featuring the 'Orbital Sphere' logo on the front and sponsor branding on the side. This also pays homage to our team last season, where the cap was a beloved addition to our pit display.

SPONSOR ROI AND PLACEMENT STRATEGY

We maximised value for our sponsors by treating our uniform as prime advertising real estate. We implemented a hierarchy of placement based on contribution tiers:

- Prime Placement: Key partners such as Jersey Energy, Cortida, and Digital Jersey are positioned on the upper chest of the polo and jacket, ensuring they are visible in close-up photos and video interviews.
- Secondary Placement: Partners, including Beaulieu, Collins, and The Weekly Spaceman, are arranged in a grid formation on the torso, demonstrating the breadth of community support we have secured.
- Exclusive Spot: The team cap features a dedicated side-panel spot for Cortida, offering unique visibility distinct from the main cluster of logos.

SUSTAINABILITY

Aligning with our engineering philosophy of the 'Triple Bottom Line (profit, people, planet)', we aimed to source merchandise that is durable and long-lasting. By choosing high-quality varsity jackets that can be worn casually outside of the competition, we reduce the likelihood of the items becoming single-use 'fast fashion' waste.

IMPACT

"If you analyse the function of an object, its form often becomes obvious" - Ferdinand Alexander Porsche

TARGET AUDIENCE ANALYSIS

Our marketing strategy segments our audience into three distinct pillars:

• **Corporate Partners (Sponsors):** We appeal to their desire for professionalism and community involvement, using LinkedIn to showcase our organizational structure and "Responsible & Accountable" management style.

• **The STEM Community (Judges & Peers):** We demonstrate technical competence and precision through "behind-the-scenes" content on Instagram, highlighting our iterative design process and scrutiny checks.

• **Future Innovators (Students):** We use accessible, visual content to demystify engineering, aiming to inspire the next generation of Jersey students to pursue STEM careers.

STRATEGIC OBJECTIVES

We utilise the 7Ps framework to ensure every touchpoint of the Ekleipsis brand is optimised for the judges and our audience:

• Product: Our core product is high-performance engineering. We treat the car not just as a vehicle, but as a showcase of precision, featuring our signature 'Purple Sphere' livery to ensure it is instantly recognisable on the track.

• Price: We positioned our sponsorship tiers (Bronze to Gold) based on a 'Value-Based Pricing' model.

• Place: Our distribution channels are hybrid. Physically, we dominate at the Pit Display; digitally, we distribute content via LinkedIn (for corporate professionalism) and Instagram (for visual storytelling).

• Promotion: We use a 'Story-First' approach. Instead of just asking for money, we promote the narrative of "Jersey to the World," and "Supporting Women in STEM," making sponsors feel they are funding potential, not just a school trip.

• People: Our team is our brand ambassadors. Every member, from the Team Principal to the Creative Lead, has undergone media training to ensure we communicate our values of 'Ambition and Integrity' consistently during interviews.

• Process: We have automated our marketing workflow. Using a shared content calendar and approval matrix (as seen in our RACI chart), we ensure no post goes live without a double-check for typo accuracy and brand alignment.

• Physical Evidence: This portfolio, our uniforms, and our pit display serve as the tangible proof of our brand's quality.

MENTORING YOUNGER TEAMS

As part of our STEM Racing journey, we wanted to give back to the community and help inspire the next generation of engineers, particularly encouraging young girls to explore STEM. To achieve this, Eve and Florence visited the Beaulieu Primary STEM Racing teams to provide guidance and support. During their visit, they shared the knowledge and experience they had gained from both last year's and this year's projects, offering practical tips on design, construction, and problem-solving. They worked closely with the primary students, helping them understand key engineering concepts and the racing process, while also demonstrating the excitement and creativity involved in STEM activities. Through this mentoring, Eve and Florence were able to empower the younger students, build their confidence, and inspire them to continue exploring STEM in fun and engaging ways.

SWOT ANALYSIS

Before launching our campaign, we conducted a SWOT analysis to identify where Ekleipsis stands in the competitive landscape.

Opportunites (External)	Threats (External)
CSR Budgets: Many local Jersey finance firms have unspent Corporate Social Responsibility budgets we can tap into	Logistics Delays: Shipping delays (weather/ferries) threaten our ability to receive merchandise on time.
Media Gap: Local news outlets are eager for positive youth stories, offering us free PR opportunities	Competitor Saturation: Other local teams are approaching the same pool of sponsors.
Opportunites (Internal)	**Weaknesses (Internal)**
Visual Identity: Our Purple/Gold color palette is distinct and high-contrast, standing out against the common red/blue teams.	Resource Limits: As a very busy 3 person team, we are very limited on hours available
Story: The "Small Island, Global Ambition" narrative is emotionally compelling to local sponsors	Budget Constraints: Manufacturing costs on an island are 15% higher due to shipping.

Strategic Response: To counter the threat of Logistics Delays, we prioritized 'Digital Sponsorship' assets (social media posts) which require no shipping. To address Competitor Saturation, we focused on niche sponsors (tech/engineering firms) rather than general retail, aligning with our specific STEM focus.

FINANCIAL STRATEGY

"If you analyse the function of an object, its form often becomes obvious" - Ferdinand Alexander Porsche

FINANCIAL PHILOSOPHY

At Ekleipsis, we treat our budget not just as a spending limit, but as a strategic asset. Operating from Jersey presents unique logistical challenges, specifically regarding shipping and material procurement. Therefore, our financial strategy is built on a "Lean Manufacturing" model—prioritizing local sourcing to reduce costs and carbon footprint, while maintaining a strict contingency fund to mitigate the risk of island logistics delays.

BUDGET

CATEGORY	ESTIMATED COST	ACTUAL COST	VARIANCE	REASONS FOR VARIANCE
Competition entry fees	£200	£200	£0	Fixed cost
Manufacturing and Materials	£100	£110	+£10	Extra balsa required for testing
Branding and Merchandise	£700	£680	-£20	Negotiated bulk discount
Pit Display Items	£300	£320	+£20	Upgrade to sustainable lighting
Research and development	£100	£90	-£10	Efficient £D printing
Outreach and Events	£100	£80	-£20	Utilizing school facilities
TOTAL	£1500	£1480	-£20	Spare money for unpredictable eventualities

SPONSORSHIP STRATEGY

We deliver tangible ROI through three key channels:
1. Brand Visibility: High-velocity placement of sponsor logos on the Ekleipsis chassis and pit display, ensuring exposure during competition heats and media coverage.
2. Digital Engagement: Targeted shout-outs across our social media ecosystem (Instagram, LinkedIn, Facebook), connecting our partners with our growing digital audience.
3. Community Association: Aligning partner brands with values of innovation, female empowerment, and sustainability

Our Sponsorship is divided into tiers, so Sponsors know exactly what to expect. Technical partnerships give businesses the chance to showcase their expertise and gain valuable exposure, while directly driving our team's innovation and success by providing services or support at reduced or no cost, in return for the exciting sponsorship benefits we offer.

Gold Partner (£600+)
- Lead sponsor status
- Large, prominent logo on car, uniforms, and pit display booth
- Featured in all media and promotional campaigns.

Silver Partner (£300-£599)
- Medium logo placement on car, uniforms, and pit display booth.
- Regular mentions on social media and marketing materials.

Bronze Partner (£100-£299)
- Small logo on promotional materials and booth.
- Mentions in social media updates.

Technical Partnerships
- Large, prominent logo on car, uniforms, and pit display booth
- Featured in all media and promotional campaigns.

Regardless of value, we want to promote and support local industries and businesses, so we are ensuring that all our Technical Partnerships get Gold Sponsor treatment.

SPONSORS

Our gold partners played a vital role in supporting our STEM Racing journey. These included Cortida and Jersey Energy, whose generous support helped us fund key areas of our project and progress confidently through the competition. We were also proud to continue our partnership with our returning sponsor, Romerils, who supported us last year and contributed significantly to our success in winning the Entry Class and a Jersey Tech Award. Their continued belief in our team has been extremely motivating and valuable to our development. In addition to this, our technical partners provided essential specialist support. Switch Digital helped us to develop and refine our portfolios to a professional standard, offering guidance on layout, structure, and presentation. Collins supported us by printing our pit display and portfolios to a high quality, ensuring that our visual presentation reflected the professionalism of our work. Together, our sponsors have played a crucial role in enabling us to perform to the best of our ability.

INCOME AND ALLOCATION

Our funds were raised though a mixture of on school events and corporate sponsorship. To ensure maximum ROI for our partners, we ensured that a large proportion of our budget was allocated towards the development of merchandise materials, whilst also allowing for enough to be spent on performance engineering to ensure a competitive car.

COLLABORATIONS AND SPONSORSHIP

"If you analyse the function of an object, its form often becomes obvious" - Ferdinand Alexander Porsche

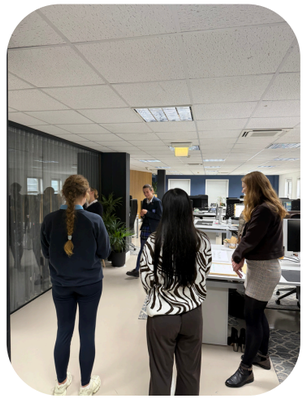
COLLABORATIONS

As a team, we collaborated closely with our technical partner, Switch Digital, who provided valuable professional support throughout our project. We took part in a series of structured workshops that focused on improving our verbal presentation skills, the quality and layout of our portfolio, and our online presence. These sessions helped us to communicate our ideas more clearly and confidently, as well as present our work to a higher professional standard. In addition to this, we also collaborated with Mr Du Bois, who shared specialist knowledge on materials, car design, and aerodynamics. He provided us with practical tips and industry-style advice on improving performance, efficiency, and overall build quality. His guidance helped us to better understand real-world engineering principles and apply them effectively to our car design and development.

SPONSORSHIP ACQUISITION PIPELINE

Securing funding wasn't about luck; it was a structured sales process. We utilised a standard sales funnel approach to track our progress from initial contact to secured funds:

1. Identification (Lead Gen): We mapped the Jersey business landscape, identifying sectors with high alignment to STEM (e.g., Finance, Construction, Tech). We focused on companies with existing CSR (Corporate Social Responsibility) mandates.
2. The Pitch (Value Proposition): We customised our pitch decks for each sector. For tech companies, we emphasised our CAD/CAM precision; for local retailers, we emphasised community pride and visibility.
3. Negotiation (Closing): We adopted a flexible negotiation strategy. If a sponsor couldn't meet the financial ask for 'Gold Tier,' we pivoted to 'Value-in-Kind' (e.g., receiving free printing or materials instead of cash), which reduced our expenditure budget directly.
4. Servicing (Retention): Post-acquisition, we planned to implement a 'Sponsor Update' newsletter. Sent monthly, to keep our partners informed on our progress, ensuring they feel involved in the journey and are more likely to renew their support for future seasons.



Team Ekleipsis learning content creation techniques at Switch Digital

BEING PART OF OUR LEGACY

At Ekleipsis, we view our sponsors not merely as financiers for a single race season, but as Strategic Partners in Education. Their investment extends far beyond the race track, creating a tangible legacy of STEM resources that will benefit our school for years to come. By partnering with us, our sponsors are directly addressing the 'skills gap' in Jersey, helping to equip the next generation with the tools they need to succeed in a technology-driven world.

1. The Infrastructure Legacy (Tangible Assets): Thanks to the generous capital investment from our 'Gold Tier' partners, we have been able to get access to professional equipment and high-quality materials. Unlike disposable assets, this equipment remains with the school, allowing future STEM Racing teams and students to learn on professional-grade hardware and broaden their horizons and interests.

- Sponsor Link: Companies like Cortida are effectively donating a permanent educational asset to the student body, ensuring their brand is associated with learning every single day, not just on race day.

2. The Talent Pipeline (Human Capital): Our sponsors understand that today's students are tomorrow's employees. By supporting Ekleipsis, they are actively nurturing a local talent pipeline.

- Skill Retention: Operating from an island, retaining skilled youth is a challenge. Our partners are helping to show students that exciting, high-tech careers exist right here in Jersey.
- Direct Engagement: Through our 'Mentor Sessions,' experts from Switch Digital have worked directly with our team, fostering relationships that we hope will lead to future internships, but more importantly, a sharing of expert knowledge and experience.

3. The Knowledge Bank (Intellectual Legacy): To honour the investment of our sponsors, we have established the 'Ekleipsis Knowledge Bank.' This will be a digital archive containing our marketing templates, sponsorship pitch decks, CFD simulators and research, and CAD methodologies.

- The 'Pay It Forward' Model: This ensures that next year's entry-level teams do not have to start from scratch. Our sponsors' contribution is effectively 'recycled' year after year, as their funding helps build a foundation of knowledge that makes every subsequent Jersey team stronger and more competitive on the global stage.

4. Community Impact & CSR: For our corporate partners, Ekleipsis serves as a vehicle for their Corporate Social Responsibility (CSR) goals.

- Inspiration: By funding our primary school outreach program, where we teach basic aerodynamics to the primary class competitors, our sponsors are helping to spark an interest in science at a grassroots level.
- Visibility: We will provide our sponsors with 'Impact Reports' showing exactly how their funds helped us reach about 30 students, giving them the data they need to justify their support to their stakeholders.

Our ultimate marketing goal is inspiration. By documenting our use of Fusion360, wind tunnels, and project management tools, we are actively demystifying the engineering process for younger students, proving that technical fields are accessible, creative, and exciting
